

Abstract of the disclosure

Electroluminescent device comprising in this order

- B4
- (a) an anode
 - (b) a hole transporting layer
 - (c) a light-emitting layer
 - (d) optionally an electron transporting layer and
 - (e) a cathode

and a light-emitting substance, wherein the light-emitting substance is a diketopyrrolopyrrole represented by formula I or formula III

processes for the preparation of compounds I, its uses and compositions comprising the compounds I and/or III.
